Document Body

Rob - As you are probably well aware, this week the Department of Homeland Security and the DOE, are doing aerial radiological background surveys using a helicopter mounted survey equipment. The helicopters fly about 300 feet above the ground surface. Attached is some background information and survey maps. Notice that both TI and HPNS shipyard areas are includes in these surveys. It is my understanding that DOE is coordinating with CDPH about these surveys.

I got this information from my counterpart at the City of SF. The survey maps for certain zones got modified, and I can send you the revised survey maps if you wish.

FYI, I was working from home yesterday and saw the helicopter fly over in straight lines (North-South) across my neighborhood and the rest of Oakland. The helicopter is unmarked but you cannot miss it since its flying so close the ground.

Jackie - Note that HPNS (and TI) neighborhood will be surveyed tomorrow.

Craig
